

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph beginning at page 4, line 29 as follows:

--A manual test circuit ~~18~~22 consists of a manual push-to-test switch PTT and a pair of resistors R11 and R12. When the switch PTT is depressed, a sufficient current flow occurs to cause the GFCI circuit 10 to detect a fault and use the trip function to open the main contacts (not shown).--
